

WEBSITE, METHOD AND SYSTEM FOR CUSTOMIZING DESIGNER PRODUCTS

ABSTRACT OF THE DISCLOSURE

5 A method of providing designer product
information to a customer of a designer product
manufacturer in order to customize designer products
includes transmitting computer executable
instructions over a computer network to a client
computer, which when executed on the client computer
10 cause a web browser on the client computer to prompt
the customer to input designer product configuration
preferences. The preferences input by the customer
are then received over the computer network at a web
server. Then, drawing data is retrieved from a
15 database of pre-prepared drawings for a designer
product corresponding to the designer product
configuration preferences input by the customer.
Computer executable instructions corresponding to the
retrieved drawing data are then transmitted to the
20 client computer. When executed on the client
computer, these computer executable instructions
cause the web browser on the client computer to
display the drawing of the designer product
corresponding to the preferences input by the
25 customer. The customer can then use the web browser
to directly order the designer product, or to
download any of multiple available file types
corresponding to the designer product drawing.
